LAMP

Since 1952, 3F Filippi S.p.A has been a benchmark in the field of efficient technical lighting fixture design and manufacturing.

The products, which are designed and created exclusively in the Pian di Macina - Pianoro (Bologna) facilities, are an expression of the company's ability to combine the traditional and the modern, craftsmanship and technology, appearance and functionality, and efficiency and sustainability.

Targetti has been designing and producing indoor and outdoor architectural lighting fixtures since 1928.

For over ninety years, its products have been illuminating prized artistic and architectural works throughout the world and are the expression of innovation, research, and attention to detail.

The company has always placed its experience and expertise at the disposal of architects, designers, and professionals in the lighting world.

With decades of experience and solid technical skill, Duralamp offers a wide range of high quality and efficient products.

Thanks to its expertise, it selects the latest generation components, engineering reliable products, with an offer that includes sources, LED strips, and lighting fixtures.

## LIGHT LINES

**Light plays an essential role in architectural design: it can enhance materials, textures and colours like no other element can.**

This is the reason that by trusting the technical expertise of DURALAMP and their excellent quality light sources, we have developed an entire collection dedicated to linear light: Light Lines

Lines of light integrate perfectly into architectural space, they are hidden from sight and pave the way for the imagination, particular effects and flights of fantasy. They are pure technology, uniform light, colour rendering and long-lasting.

With the Light Lines collection we are now able to provide highly specialised tools capable of supporting the work of all those involved in designing and implementing an architectural project.

Pisa Tower - Pisa - Italy

**Made for you**

## PERSONALISED SOLUTIONS FOR A GREAT PROJECT: YOURS

We are constantly searching for innovative solutions that can meet a variety of demands. Our mission is to provide light for your ideas and projects.

This is why a technical team works every day to complement the catalogue with personalised solutions of varying complexity.

Our "made to measure" service guarantee you

### **Personalised cuts and assemblies** at standard costs.

For everything you cannot already find in the catalogue do not hesitate to contact us. Our men and women will follow you throughout the creative process and support you to find products to suit your needs by always offering you the best technical solutions.

## ↘ Custom cut to size

### **STRIPS**

All LED strips and DuraNeonFlex can be supplied cut to size with or without the terminals from the range and with specific connection cable lengths.

### **PROFILES**

Aluminium and PMMA profiles can be supplied cut to size.

### **LIGHT**

Even the light colour can be custom made. DURALAMP has specific expertise in the creation of light 'spectrums' designed according to customer needs: white with specific shades, pure colours, LED strips made with colour mixes etc..

## ↘ Custom assemblies

### **READY TO USE**

Professional preparation of products ready for installation. Profiles complete with LED strips: custom made to measure, complete with the requested cables in the desired lengths, with specific end caps, with restored IP grade where requested or with other special processes (for example, resin coated final products for unusual needs or for installation in environments with particular conditions...).

# PERSONALISED SERVICE

## ↘ Ready to install

A personalised service is provided for all light ranges and profiles in this catalogue. Every process entails a fixed price that must be added to the cost per metre of the strips or profiles to be cut to size. Also consider the possibility to insert strips in profiles:

	<b>Cutting DURASTRIP HiVOLT to size* (includes a 150 cm cable):</b>
VA00	fixed cost of piece work
	<b>Cutting DURASTRIP to size* (includes a 20 cm cable):</b>
VA01	fixed cost of piece work
	<b>Cutting DuraNeonFlex to size* (includes a 30 cm cable):</b>
VA02	fixed cost of piece work
	<b>Cutting Universal and Essential profiles to size (includes mounting accessories) :</b>
	<b>Cutting DuraNeonFlex to size (no terminal)*:</b>
VA03	fixed cost of piece work
	<b>Cutting Project profiles to size (includes mounting accessories):</b>
VA04	fixed cost of piece work
	<b>Assembly of strips onto profiles:</b>
VA05	fixed cost of piece work
	EXAMPLE:
	<b>Cutting DURASTRIP to size inserted in a Universal or Essential profile (for every piece):</b>
VA01	fixed cost of cutting the strip
VA03	fixed cost of cutting the Universal or Essential profile
VA05	fixed cost of assembling the strip +profile (for every strip)

\* Durastrip and DuraNeonFlex must be cut by respecting the cutting pitch distances for each type.

Other particular processes such as resins, cables of specific lengths etc, must be agreed with the sales force on a project basis. The personalised service is subject to a minimum order: your local sales contact or our headquarters in Florence will evaluate the options available with you depending on the size of the project and required production time.

**TONES**

# TONES

## ↘ TONES:searching for the best light.

The TONES project started with the touch of madness we are famous for; artificially create the best light for a variety of combinations and colours. A research project more than normal daily work that lasted almost a year, shared with a team of architects from

the company Gensler, one of the largest architectural firms in the world. Together we analysed different combinations of materials and colours that are used in modern architecture and created the most suitable spectrum of light for each of them to enhance each composition,

both as a whole as well as every single component. The team of architects evaluated the colour rendering of individual materials, the harmony and synchronicity between the various colours, the perception of different textures and contrast enhancement;

in order to strengthen the expressive message as a whole. This was all possible to the capacity of a series of LED combinations that as a whole produce different shades of light, all with extremely rich emission spectrums to emphasize different colours.

## Today the TONES range has seven different shades of light

created digitally at first and then concretely reproduced to express various spectrums that have been specifically combined and shaped to enhance different combinations of materials and colours. A completely new, highly specialised light that has never been seen before.

The TONES range is ideal for domestic, retail, hotel and entertainment lighting, spaces where there is an interior design project that takes into account colours and materials aimed at creating a style and an atmosphere and to elicit particular emotions.

# TONES

## OPTICS

Frontal emission LED source with a projection angle of 120° available in IP20 and IP68 versions.

## LED

5 metre reel; 84LED/M

## LED LIFETIME

L80/50000H

## ALIMENTAZIONE

24V DC

TONES expresses a concept of a completely new light. No longer standard colour temperatures of light- warm, natural or cold light – and not even a precise point on the spectrum produced on request. With TONES the spectrums have been fashioned to create specific atmospheres and to ‘make’ environments like never before or better, just like in the imagination of the designer. TONES comes in 7 different "tones" of light with as many light spectrums created ad hoc in collaboration with the Architecture and Design firm Gensler to enhance and exalt different combinations of materials and colours.

# TONES

01

## CALM

Ideal materials: bricks, leather and carpet.  
Ideal colours: red, violet, brown and orange

Inspired by warm colours of the sunset TONES CALM is ideal to light materials that transmit warmth with a definite texture. Ideal for spaces where you want to convey calmness, warmth and relaxation. It is certainly the tone that is closest to that of an incandescent lamp, but unlike the latter it can respect the veracity of white and colder colours.

02

## SENTIMENTAL

Ideal materials: gold-plated metals, various shades of wood and flesh tones.

A well calibrated spectrum particularly focused on warm yellow tones but with peaks of blue and green to ensure perfect perception of white and grey, as well as perfect rendering of warm tones. It is ideal for lighting a palette of colours and materials with darker tones to create a sophisticated look. The mix of dark greys, blacks and mustard brings to mind a more masculine, "classic" style space.

03

## RECHARGE

Ideal materials: plastic, leather, wood and woven fabrics.

Palette: neutral tones, azure, violet, green and beige.

Finally, a light with warm shades that can enhance blue and azure. It has a wellbalanced spectrum that can enhance warm neutral tones as well as colder colours like azure and blue and brighter and brilliant shades. A light tone that can reinforce the message of relaxation and naturalness. Colour combinations used where the intention is to elicit emotions with earth colours and jewel tones.

04

## COLLABORATIVE

Materials: prints, stone materials, plasterwork and wood.

Palette: white, grey, brown and mustard.

A neutral tone light that works very well with whites and greys as well as warm bright shades such as mustard and burgundy.

The combination between the finishes and "collaborative" lights dedicated to them reinforce the message of an elegant, warm and refined style.

# TONES

05

## EDGY

Materials: marble, metal, stone and wood.

Palette: pure white, black, brown, yellow, red and orange.

A soft, neutral light that works well with natural materials like stone, wood and metals, yet at the same time capable of reproducing black and white faithfully.

A light that can combine materials and warm and cold shades for a more modern, urban appearance.

06

## ENERGETIC

Materials: plastic, prints and leather.

Palette: white, black and saturated colours.

The ideal light for enhancing “non” colours like deep black and pure white, that can also respect saturated colours such as bright red.

This “energetic” light enhances this timeless style in a combination of important, refined, geometric and rigorous contrasts that can relax users and transmit energy to them at the same time.

07

## LIVELY

Materials: all materials.

Palette: all colours.

Certainly, this is the best light for spaces with a wide range of materials and colours. This is a neutral light, the coldest in the TONES range that is also capable of reproducing warm tones faithfully. From tests carried out it is certainly the light with the best colour rendering on a large number of samples which makes it an excellent compromise where there are no obviously dominant colours. A bright light that reproduces neutral tones light grey and bright green very well which makes it suitable to bring a dash of nature inside closed spaces and enhance them. Gives a sense of freedom and vitality.

**LED Strips in 7 different shades of light to express different light spectrums specially designed in collaboration with the Gensler Architectural and Design firm to exalt and enhance different combinations of materials and colours.**

Please see the special section to choose the light shade that is most suitable for the materials and colours of the environment that is the focus of the lighting project.

Cold extrusion flexible silicon reel profile (5m in length) with 84 LED/m. Custom designed LED sources that can house 4 different LEDs in a single case with different characteristics in terms of emitted wavelengths and types of phosphors applied.

Front-emitting LED with a beam projection angle of 120° available in IP20 and IP68 versions.

Installation can be carried out using 3M® double-sided adhesive film or by using plastic silicon clips (included in the package). Rigid profiles are also available as accessories for visible installations. The strips can be cut using scissors at intervals of every 6 LEDs and made watertight again (in the IP68 versions) by using the caps supplied (supplied with the indicated cutting kit). Every reel is equipped with male female connectors (this only applies to the IP68 versions) to connect two light profiles together. The maximum length per single power supply is 5m. The IP68 versions are ideal for outdoor installations and under fresh water (without chloride).

To be fitted to an electronic 230V/24Vdc power supply available as an accessory. The control board can manage fixtures for a total power of max 100W. The control system is supplied with the Kit version.

A repeater is available as an accessory to connect more than one strip to the control board (see the installation drawing). The control board is equipped with an input for passive (10K variable resistance) or active (0-10V analogue signal) dimming.

# Human centric lighting ↙

Human Centric Lighting combines both luminous performances along with the well-being of people.

By operating dynamically, intensity and colour temperature will work in harmony with the natural circadian rhythm of the human body as well as having the capability to adapt to the different moments and tasks of the day.

Light is therefore not set at a fixed value but becomes an integral part of the end user's environment allowing them to participate towards the comfort of their own surroundings.

01

Ra >95

Very high colour rendering:  
indispensable in prestigious projects,  
environments with particular uses,  
museum installations...

02

## COLOUR PRECISION

High quality LED sources with the Bin centred on the Planck curve with a 2 step MacAdam tolerance on all lots in production. Precision colour temperature in the entire range.

## COLOUR CONSISTENCY

among the various lots in production and cancellation of colour shifting during useful life thanks to the low driving current, excellent thermal management and effective control of the production line.

03

04

## COLOUR UNIFORMITY IP20 AND IP68

DuraStrip IP68 are produced with extrusion technology: the high quality materials used make it possible to maintain the same light colour between IP20 and IP68!

IP20

IP68

## LONG LIFE : L70 60.000H

Double track substrate: the low power on every circuit allows for lower temperatures with a consequent reduction in voltage drop along the length.

The improved thermal management ensures a longer life for the LED sources maximising performance and colour quality over time.

# DURASTRIP

01

## DIMMABLE FROM 0 TO 100%:

easy to control light with the most common dimming systems

- DALI
- DMX
- Domotics
- Push, DALI
- CASAMBI compatible

02

## IP20 - IP65 - IP67 - IP68

The degree of protection can be selected depending on the use. Normally used in indoor installations IP20 strips can be sealed in profiles which increases mechanical resistance and simplifies maintenance.

# DURASTRIP

## TM30

The Colour Rendering Index **Ra** or **CRI**, is a dimensionless index that ranges from 0 to 100 and partially describes the capacity of a light source to faithfully render the colour of a consistently lit object in line with what a reference source would do. It is based on the adherence of a source to the light emitted by a tungsten filament evaluated on a panel of 14 colour samples, of which only the first 8 are taken into consideration, none with saturated hues.

The **TM-30** 30 index allows for a more complete reading on the way a source is able to render colour. It introduces the concept of saturation, uses a balanced mixture of incandescent lamps and sunlight as a reference and extends colour samples to 99 subdivided into 7 reference areas with colours from nature for example flowers and leaves, skin tones, colours of paintings, textiles, plastics, printed material and 14 CRI colour samples.

**CRI** COLOUR RANGE

**TM-30** COLOUR RANGE

The additional information that TM30 can give is provided by two graphs that summarise the values relating to Rf, Rg and Hue Shift (a shift in the colour hue, or the perception of a false colour compared to what we would see in sunlight), and the second how the source works for groups of materials (99CES) for immediate understanding:

The “rendering” of the source is expressed with a series of explanatory graphics of the colorimetric and qualitative characteristics and 2 distinct indexes.

**The fidelity index Rf**, which describes the ability of the source to render colours.

It varies on a scale of 0 to 100 where 100 is perfect adherence. It is also possible to have Rf targeted on one of the seven reference areas. For example “Rf skin” refers to the ability of the source to express the colours relating to the reference area concerning skin tone. It is similar to Ra but can be lower given that the reference colours range from 14 to 99 .

**DURALAMP is able to provide TM-30 values for all ranges in the catalogue on request.**

# DURASTRIP

## TM30

The **Gamut index  $R_g$** , which expresses the saturation level of the colours lit by the source. It varies on a scale from 60 to 140. Values lower than 100 indicate a decrease in saturation, higher values indicate an increase in saturation therefore more vivid colours.

Colours will be more or less saturated depending on whether they are inside or outside the reference circle.

The last in-depth graph is the detail of the deviation and rendering of semitones compared to the reference source that is represented by the following diagram:

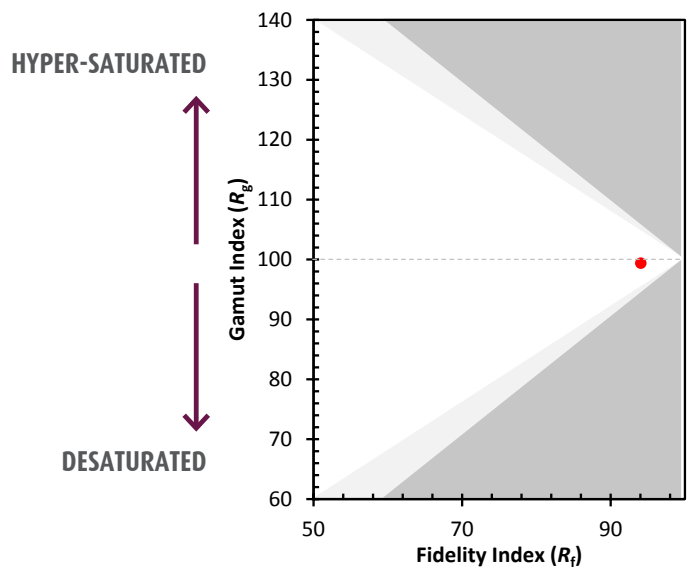

**DESATURATED**

**HYPER-SATURATED**

**HUE-SHIFT**

## WHAT "MAKES THE DIFFERENCE" IN CLEAN LIGHT EMISSION?

### PURE GOLD 99.9% CONNECTIONS

of a diameter of 1.0UM or above. Gold ensures the best stability connection and improved resistance to dangerous chemical agents (oxidising substances), an important difference compared to LED sources from other producers.

### DEPOSITION OF PHOSPHORS AND DIFFUSER GEL IN UNIFORM THICKNESSES

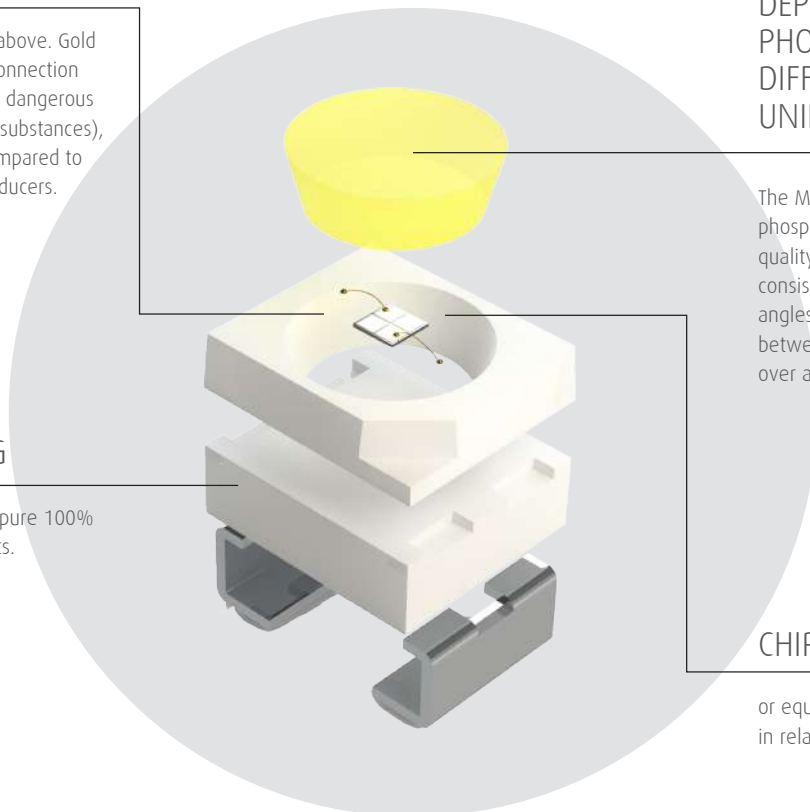

The Mitsubishi and Intematix phosphors used provide the highest quality and efficiency for colour consistency on all light emission angles, ensuring total colour uniformity between the different production lots over a period of time.

### PLASTIC HOUSING

of non-Reconditioned and pure 100% copper for external contacts.

### CHIP EPISTAR

or equivalent quality brands (can vary in relation to the type of strip).

...ALSO, A GOOD BALANCE OF ELEMENTS

WELDABLE POINTS PROTECTION

(OSP - ORGANIC SOLDERABILITY PRESERVATIVE):

It is a chemical process that adds a layer of organic coating to the bare copper surface: it has antioxidant effects and greater protection from thermal shock and humidity that are normally present in standard environments.

THICKNESS OF COPPER LAYERS OPTIMISED

by type, length and power of the product:

28gr/56gr/85gr/113gr. 28gr ≥ 35μ

- 1 Layer of Polyimide (PI) which is highly resistant to heat, wear and friction
- 2 Layer of copper with a printed circuit board
- 3 Layer of Polyimide (PI)
- 4 Second layer of copper
- 5 Layer of Polyimide (PI)
- 6 3M adhesive

WE HAVE INDICATED THE DISTANCE ON EVERY STRIP

It is necessary between the strip and the diffuser on the profile or the wall to eliminate any possible speckled effect.

MAX 1,6mm NO DOT

MINIMUM DISTANCE TO REDUCE THE SPECKLE EFFECT:

# DURASTRIP

DURASTRIP are the real stars of our lighting projects. They are what add value to environments by 'moulding' them with the different features in the range which has been extended significantly to provide new tools, not only in terms of light colour but also in design and installation applications.

## CONNECTIONS

Complete with a 15 cm long IP65/68 M/F cable on 2 sides. Maximum connection length 5 m. Max 4A.  
For longer connections, connect in series or parallel, diagram on page 152.  
Strips can be cut by following the cutting indications printed on the strips. For IP65/IP68 strips restore the IP protection after cutting.

## ASSEMBLY

Complete with 3M double-sided tape to attach to the surface and jumpers to be screwed to the surface. When using double-sided tape degrease the application surface adequately.

## PACKAGE

Packaged in 5 m reels.  
Or custom products cut to specific lengths see page 11, 322.

DURASTRIP PRO70 were designed to satisfy the range of use that requires an excellent product as well as cost optimisation. The PRO70 range is produced with a single circuit substrate, a leaner production that takes advantage of production progress to obtain efficient strips with excellent light emission and colour control over time. Available in an IP20 and IP65 version.

## ACCESSORIES

See page 58.

DURASTRIP PRO uses “copper shielded” technology (complete copper coating on the circuit on both sides of the support) designed by our Research and Development Laboratory: the increased quantity of copper improves thermal management and ensures a longer life.

DURASTRIP PRO are produced with a dual circuit substrate: the power distributed to every circuit is less, the temperature is halved and the risk of power failures is eliminated.

LED density constant on all powers: minimising the ‘dot’ effect even with a grazing light. Using LED 3528 limits the colour shifting effect on the beam emission angles.

Thanks to the new extrusion technology the colour temperature of DURASTRIP PRO IP68 is EXACTLY the same as DURASTRIP PRO IP20. A big advantage that makes it possible to use strips with different IP ratings in adjacent surroundings with the certainty of maintaining a constant light colour and the required effect.

## LED

LED 2358  
240 LED/m  
70W (14W/m) - 95W (19W/m) - 120W (24W/m)  
24VDC  
Ra >95  
Lifetime: >50,000 h  
Warranty: 5 years

## COLOURS OF LIGHT

Choice of white colour temperature

## BINNING

ANSI/SDCM: 3 step.  
2700K - 3000K - 4000K - 6000K

## DIMMABILITY

Dimmable 0-100%  
DALI - DMX - 1-10  
Analogue and digital domotic control systems  
Push Dali with ZKCD controllers  
CASAMBI compatible

## CONNECTIONS

Complete with a 15 cm long IP65/68 M/F cable on 2 sides. Maximum connection length 5 m. Max 4A.

For longer connections, connect in series or parallel, diagram on page 152.

Strips can be cut by following the cutting indications printed on the strips. For IP65/IP68 strips restore the IP protection after cutting.

## ASSEMBLY

Complete with 3M double-sided tape to attach to the surface and jumpers to be screwed to the surface. When using double-sided tape decrease the application surface adequately.

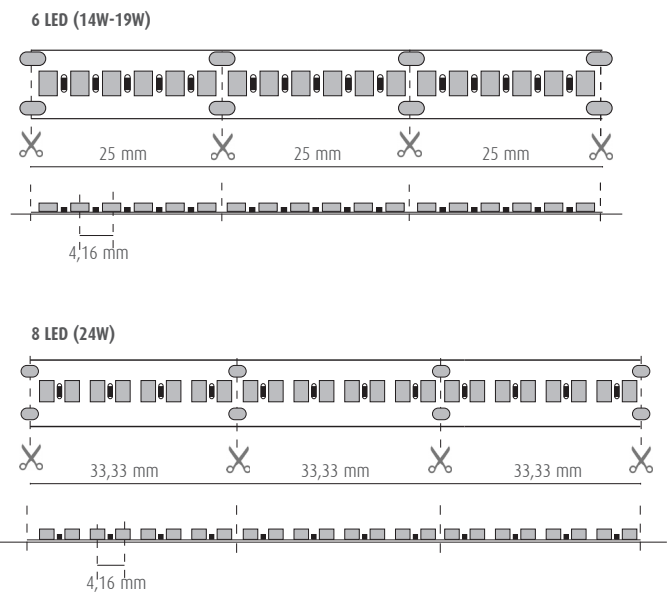

**Always use with aluminium profiles for heat dissipation.**

## PACKAGE

Packaged in 5 m reels.  
Or custom products cut to specific lengths see page 11, 322.

PRO240 is a range of strips with significant power, up to 70W/m. With an efficiency of 110lm/W and thanks to a narrow space between the LED sources, PRO240 is the strip to use when strong light emission is required, for example for installations at great heights. At the same time it guarantees extreme uniformity and colour reliability, made superlative by Ra>95. PRO240 are new generation strips which are increasingly efficient and reliable over time. Available in an IP20 and IP65 version.

High Density LED strips also have an Integrated Circuit inside the LED package. The integrated circuit is a constant current regulator to compensate for voltage fluctuations and to keep the light emission uniform even over long distances. Integrating the circuit eliminates the need for external resistors which are usually fixed to the substrate between one LED and another and allows for closer positioning and adjustment of the LED sources for uniform and uninterrupted emission with superior performance in terms of lumen/watts.

Cutting DURASTRIP to size\*:

fixed cost of piece work

VA01

\* Please consider pitch cut. Includes a 20 cm cable.

700 very small LEDs per meter mounted with a centre distance of only 1.4 mm create a highly effective continuous line of light. The cut every 10 mm allows unprecedented installation flexibility. It can be used with wood panelling, cove lighting, etc. Always use with an aluminium profile to allow heat dissipation and with low thickness profiles as the pitch of the LEDs cancels any pointed effect.

# DURASTRIP TRIPLES

## LED

LED 2835SMD  
480 LED/m  
42W/m  
24VDC  
Ra >90  
Lifetime: >50,000 h  
Warranty: 5 years

## COLOURS OF LIGHT

Choice of white colour temperatures.

## BINNING

ANSI/SDCM: 2 step.  
3000K - 4000K

## DIMMABILITY

Dimmable 0-100% Flicker Free  
DALI - DMX - 1-10  
Analogue and digital domotic control systems  
Push Dali with ZKCDA controllers  
CASAMBI compatible

## CONNECTIONS

IP20: terminals with free wires  
Strips can be cut to size by following the cutting indications printed on the strips.

## ASSEMBLY

Complete with 3M double-sided tape to attach to the surface. When using double-sided tape degrease the application surface adequately.  
**Always use with aluminium profiles for heat dissipation.**

## PACKAGE

Packaged in 5 m reels.  
Or custom products cut to specific lengths see page 11, 322.

TRIPLES are strips that are closest to LED plates with the added advantage of flexibility, they are easy to cut in the field at intervals of 5 cm and easy to install. With a width of 25 mm and careful positioning of the LED sources they ensure a broad luminous surface and considerable power output: 5000 lumen per metre for warm light. TRIPLES are installed in profiles with wide diffusion for example in suspension profiles in the range.

### LED SPACING AND PITCH CUT

CASAMBI compatible

## CONNECTIONS

IP20: terminals with free wires  
Maximum connection length 5 m. Max 4A.  
For longer connections, connect in series or parallel, diagram on page 152.  
Strips can be cut to size by following the cutting indications printed on the strips.

## ASSEMBLY

Complete with 3M double-sided tape to attach to the surface.  
When using double-sided tape decrease the application surface adequately

## PACKAGE

Packaged in 5 m reels.  
Or custom products cut to specific lengths see page 11, 322.

The EXTRA NARROW series is a concentrate of quality materials that is shared with other DURASTRIP: high quality choices to ensure a professional level performance, excellent heat dissipation and long duration, Ra >90. EXTRA NARROW is the range with the smallest substrate in the entire collection. Just 5 mm or 6 mm wide, it solves all needs not only connected to confined spaces but above all, for characteristic lighting design.

To be used with thin section profiles from the range. The type of LED source used and the short distance between the light sources eliminate the speckled effect, even in profiles with lenses that are very close together.

Two-way DURASTRIP are made by mounting the LED sources on the substrate in two orthogonal lines: this creates an asymmetric emission of around 220°. The previous final result could only be obtained by using two strips and a particular arrangement. Two-way DURASTRIP are a functional optimisation and therefore perfect for projects that focus on using decorative profiles or where a wall washer effect is required.

Owing to the particular qualities of the substrate, DURASTRIP S BEND allows tight corners to be created while maintaining the uniformity of light. It is ideal for following and emphasising the most imaginative forms of modern architecture along with providing creative lighting solutions for many other applications where a minimal installation radius is desired.

## PACKAGE

Packaged in 20 m reels.  
Or custom products cut to specific lengths see page 11, 322.

EXTRALONG 24V, produced in 20 m reels allow for installations of great lengths thus reducing power points to a minimum: with two reels and power supplies at opposite ends, up to 40 metres of lines of light can be obtained without running cables.

EXTRALONG 24V solve problems in situations that require indirect lighting (cove lighting) or outdoors where numerous power supplies cannot be stored or where there are limitations for cables to pass.

EXTRALONG 24V have all the same quality components and construction method as all other strips in the range to obtain real lighting uniformity over the entire length of the strips.

## COLOURS OF LIGHT

Choice of white colour temperatures.

## BINNING

ANSI/SDCM: 2 step.  
3000K - 4000K

## CONNECTIONS

IP20: terminals with free wires  
IP65: complete with a 15 cm long IP65/68 M/F cable on 2 sides.  
Maximum connection length 50 m.  
Strips can be cut to size by following the cutting indications printed on the strips.

## ASSEMBLY

Complete with 3M double-sided tape to attach to the surface. When using double-sided tape degrease the application surface adequately

## PACKAGE

Packaged in 50 m reels.  
Or custom products cut to specific lengths see page 11, 322.

EXTRALONG 48V produced in 50 metre reels allow for installations of great lengths without the need for extra power supplies. With two power supplies at opposite ends up to 100 metres of light can be obtained! EXTRALONG 48V have all the same quality components and construction method as all other strips in the range to obtain real lighting uniformity over the entire length of the strips.

IP67: complete with a 15 cm long M/F cable on 2 sides. Maximum connection length 5 m. Max 4A.  
 Strips can be cut to size by following the cutting indications printed on the strips. 2 PIN connectors included in kit code KT07UXOL allow strips to be linked up to a maximum run of 5 meters.

## ASSEMBLY

Installation requires metal clips, see separate accessories code.

## PACKAGE

Packaged in 5 m reels.  
 Or custom products cut to specific lengths see page 11, 322.

A minimal and unobtrusive light element providing a wall wash effect. By utilising an asymmetric reflector, the light is directed across the vertical surface, the efficiency of the LED's power is maximised to provide a uniform wash effect of light. The product is sealed to guarantee a high degree of Ingress Protection (IP67).

As a result of each individual LED being fitted with a 30 ° aperture, DURASTRIP GRAZER will create a distinguished radiance effect. The grazing properties will highlight a relief on a building's facade, the material essence of modern wallpaper or the refined imperfections of an architectural wall. The narrow angle of GRAZER requires the installation to be positioned slightly offset from the wall enhancing the three-dimensional aspect of the illuminated vertical surface.

DURASTRIP FULL SPECTRUM means that the white colour of this strip is created by a spectrum that includes all of the colours.

Colour rendering is excellent, Ra>90 but DURASTRIP FULL SPECTRUM goes far beyond this figure.

The FULL SPECTRUM is able to reproduce the colours in the environment, returning the vividness of the objects as if they are lit by the sun, in all colour temperatures.

To show more clearly and immediately the performance of these strips from the colour rendering point of view, we have provided the values indicated by the TM-30.

DURASTRIP FULL SPECTRUM is indispensable in environments where the point of colour is very important: art galleries, museums, fabric shops, etc.

The colour of the light and emission intensity have a profound influence on people's emotional state, according to Human Centric Lighting principles. Therefore, using tools like the DURASTRIP CCT is fundamental as they allow dynamic light management to improve the environment and the feelings of the people who find themselves there, to promote well-being and improve performance.

If dynamic light is essential in environments where people remain for a long period of time, such as offices, schools, etc., its use is equally useful to create different atmospheres in the same environment: it allows you to illuminate a restaurant with a vibrant white light at lunch and a softly relaxing light at dinner!

Durastrip CCT offers two white colour temperature variation options: from 1800K to 3500K or from 2700K to 6500K.

Cutting DURASTRIP to size\*:

fixed cost of piece work

VA01

\* Please consider pitch cut. Includes a 20 cm cable.

DURASTRIP DIM-TO-WARM allows the light intensity to be decreased and the colour temperature of the light to be varied at the same time. By simulating the dimming curve of old incandescent lamps, it ensures the right light for different times of the day and for different activities in the environment, according to the Human Centric Lighting principle.

The single channel dimming technology works on a single chip, 'heating' the colour of the light and thus creating a comfortable atmosphere and a natural feeling to the light, to put the user at the centre of the lighting experience.

The 1800-3000K version is particularly desired for installations into hospitality atmospheres, restaurants, etc.

## DIMMABILITY

Dimmable 0-100% Flicker Free  
 DMX with ZKCDMXFF, ZKCDMX-RFF  
 Analogue and digital domotic control systems  
 CASAMBI compatible

## CONNECTIONS

Complete with a 15 cm long IP65/68 M/F cable on 2 sides. Maximum connection length 5 m. Max 4A.  
 For longer connections, connect in series or parallel, diagram on page 152.  
 Strips can be cut to size by following the cutting indications printed on the strips. For IP65/IP68 strips restore the IP protection after cutting.

## ASSEMBLY

Complete with 3M double-sided tape to attach to the surface and jumpers to be screwed to the surface. When using double-sided tape degrease the application surface adequately.

## PACKAGE

Packaged in 5 m reels.  
 Or custom products cut to specific lengths see page 11, 322.

DURASTRIP PRO60 RGB were designed to satisfy the range of use that requires an excellent product as well as cost optimisation. The PRO60 RGB range has a substrate that is optimised for power management in relation to flow and useful life. Excellent light emission and colour control over time. Available in an IP20 and IP65 version.

RGBW DURASTRIP, RGB colours along with a shade of warm white. Introducing a white spectrum the saturated RGB tones are 'intensified' and the nuances that can be obtained increase: at the same time white can be enriched with RGB colours to obtain surprising pastel tones. Above all RGBW offer the possibility to obtain a 'real' white in the indicated tone, 2700K or 3000K and not white obtained by overlapping red-green-blue, i.e. the one produced by RGB strips. White emission from the LED quad is more efficient than coloured LED sources which means RGBW strips are more high performance and suitable for professional uses. They can be interfaced with special 4 channel controllers, Code ZKCDMXW to obtain all required tones in a continuous way.

The EXTRA NARROW series is a concentrate of quality materials that they share with other DURASTRIP: high quality choices to ensure a professional level performance, excellent heat dissipation and long duration, Ra >90. EXTRA NARROW is the range with the smallest substrate in the entire collection. Just 5 mm wide - 6 mm for the RGB version- it solves all needs not only connected to confined spaces but above all for particularly light and characteristic 'light designs', even when using the infinite range of RGB colours.

To be used with thin section profiles in the range. The type of LED source used and the short distance between the sources eliminate the speckled effect even in profiles with lenses that are very close together.

The most powerful RGB strip in the range, 240 LED/m, 3 in 1 3535RGB. This new generation chip is very compact: this allows for optimisation of heat and increases the lifespan ensuring colour stability over time. From a lighting point of view it provides excellent performance in terms of luminous efficiency: ULTRA RGB contributes to meeting the needs of installations that require a decorative impact and applications that demand a strong light supply with high emission uniformity in the best way.

 24VDC  
 Lifetime: >35,000 h  
 Warranty: 3 years

## COLOURS OF LIGHT

RGB + 3000K (Ra>90)

## DIMMABILITY

Dimmable 0-100%  
 DMX 512 SIGNAL

## CONNECTIONS

IP20: terminals with free wires  
 Maximum connection length 5 m.  
 IP65: complete with a 15 cm long IP65/68 M/F cable on 2 sides.  
 Strips can be cut to size by following the cutting indications printed on the strips.  
 The electrical connection must be from PI to PO strictly following the direction of the arrow printed on PCB: if the connection is reversed, it will be impossible to control the strip and it might even be damaged.

## ASSEMBLY

Complete with 3M double-sided tape to attach to the surface.  
 When using double-sided tape degrease the application surface adequately.  
**Always use with aluminium profiles for heat dissipation.**

## PACKAGE

Packaged in 5 m reels.  
 Or custom products cut to specific lengths see page 11, 322.

DURASTRIP Pixel Control allows each segment (10 cm) of LEDs to be controlled independently. This means it is possible to manage an infinite number of combinations of dynamic colour on an infinite number of colours from the RGB + white 4 in 1 chip, with colours ranging from pastel shades to pure RGB. Pixel Control is the most attractive, amazing, and easily applied dynamic light solution. It connects directly to the DMX512 signal on the control system, considering that the segments are configured on the addresses from 1 to 50.

# DuraNeonFlex

# DuraNeonFlex Collection

## TYPE

Flexible light line with uniform emission in two directions depending on the model.

## CHARACTERISTICS

Flexible light line with continuous lighting: so flexible you can create curves with a minimum diameter of 60mm according to model

## COLOUR OF THE LIGHT

Range of whites, pure colours and RGB.

## MATERIAL

Extremely flexible, impact resistant and weatherproof extruded silicone.

## INSTALLATION NOTES

Surface mounted with clips; where product requires, it may be cut following cutting marks (5cm). Fitted with different outputs for power supply: refer to next pages. Installation temperature: 0° ~ 35°C; working temperature: -25° +35°C.

## DIMMABILITY

Dimmable 0-100%  
DALI - DMX  
Analogue and digital domotic control systems  
Push Dali with ZKCDA controllers  
CASAMBI compatible

## PACKAGE

Packaged in 5 m or 10 m reels.

## CUSTOM CUT

DuraNeonFlex can be ordered in custom lengths, with or without the terminals required for the project (in-line, side, or rear connection). Follow the indications for the maximum lengths and different cutting pitches for each model.

The DuraNeonFlex collection is significantly expanded with the addition of new product lines. **DuraNeonFlex Twist**, the best tool for following the fluid shapes of contemporary architecture or creative lighting, obtaining unprecedented effects: a light strip that can be twisted up to 360° in one meter! DuraNeonFlex Twist can be cut to measure at any point to create the exact length required for the project and without approximation!

**DuraNeonFlex Mini** can also be cut at any point: the DNF MINI section is very small and the emission is vertical, which allows curves up to 60mm in diameter. DNF MINI is available in white or colored light, ideal for highlighting details or signs.

Both of the new lines share high quality materials with the ability to choose in line, side, or rear connections with the classic **round or square DuraNeonFlex**.

Cutting DuraNeonFlex to size\*:

## DNF MINI / DNF TWIST

Duraneonflex (in short DNF) is configured in the following 2 methods both with a minimum quantity to be confirmed with the sales force:

### 1 DURANEONFLEX WITHOUT TERMINALS

Provided by meters, max length 5m or 10 m according to model (professional use 50 mt reel also available); cut every 5 cm or free cut for DNF Twist and DNF MINI. MINI. They can be field cut as the cutting point is clearly indicated, apart from free cut items DNF Twist and DNF MINI.

Terminals and other accessories must be ordered with their separate codes.

DNF Strips with end cap are IP40; if properly sealed with glue they provide IP65.

### 2 DURANEONFLEX COMPLETE WITH TERMINAL: A - B/D - C

Factory prepared DNF are complete with the chosen terminal and end cap. The power cord with plug for driver connection is INCLUDED into the package (except on MINI DNF and DNF Twist which have free wires). Provided in meters, max length 5 m or 10 m ; cut every 5 cm or without minimum cut requirement for DNF Twist and DNF MINI.

Factory prepped DNF Strips are IP65.

# DuraNeonFlex

## CODE COMPOSITION

The list of principal codes for DuraNeonFlex TOP and VERT can be found on the following pages.

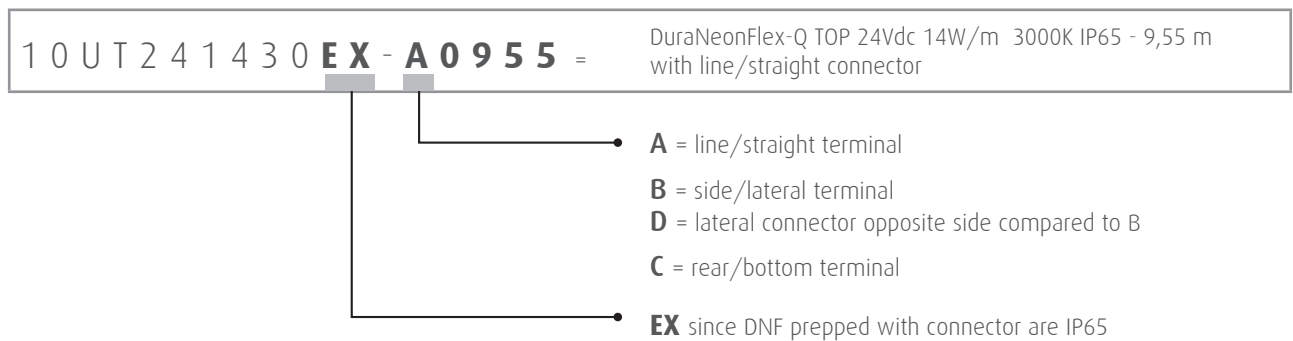

DNF strips without terminals are available both in 10 m standard reels, 5 m for DNF Twist (50 m professional reel also available) or with custom cut size. Maximum length per single power supply: 10 m, 5 m per DNF Twist.

The required length for your custom cut is to be added at the end of the code using 4 digits for the size in cm. Max length is 10 m, 5 m for DNF Twist. Cut size according to size, see the following examples:

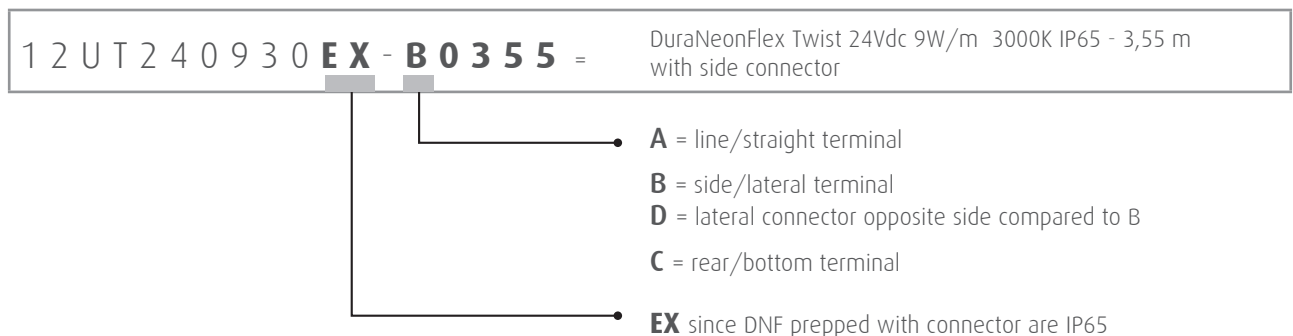

Only strip: accessories to be added

Strip complete with connector, power cord and end cap

DNF Twist complete with connector, power cord and free wires

## MOUNTING, CABLING AND CONNECTION SOLUTIONS

Line/straight terminal wiring

Side/lateral terminal wiring

Rear/bottom terminal wiring

Jumper for 'in line'\* cabling connections

Jumper for 'lateral'\* cabling connections

Jumper for 'rear'\* cabling connections

PC clip for DNF anchoring

Transparent 'omega shape' clips

Aluminum channel

Flexible metal profile

# DuraNeonFlex

## TYPE

Flexible light line with uniform emission in two directions depending on the model. The section of the profile can be rounded or squared. Both models have a TOP and VERT versions. Available to order with minimum quantities to be agreed on with the sales force.

## CHARACTERISTICS

Flexible light line with continuous lighting: so flexible you can create curves with a minimum diameter of 12 cm for VERT models.

TOP flex Version: the light is emitted on the upper side of the light channel.

VERT flex Version: vertical emission away from the bottom of the channel.

Anti-glare diffuser function.

The DURANEONFLEX range has two different powers: 9W and 14W for the whites and 9W power for colours.

Maximum length per single power supply: 10 metres. Custom cuts can be requested, or field cut, every 5 cm.

## COLOUR OF THE LIGHT

Range of white and pure colours both with 120 LED per meter.

## MATERIAL

Extremely flexible, impact resistant and weatherproof extruded silicone.

## INSTALLATION NOTES

It is attached to the surface with the clips; it can be cut following the cutting marks (5cm). Fitted with different outputs for power supply: see the next pages.

Installation temperature: 0° ~ 35°C; working temperature: -25° +35°C.

## DIMMABILITY

DuraNeonFlex are dimmable like all DURASTRIP: please see the following pages.

## CUSTOM CUT

DuraNeonFlex (DNF) can be ordered 'upon project'. DNF can be supplied at any specific length (max length 10 meters for single power supply, cut every 5 cm) with or without the electrical terminals or in 10 m and 50 m reels without terminals.

Cutting DuraNeonFlex to size\*:

fixed cost of piece work,  
includes the selected terminal connector.

VA02

fixed cost of piece work,  
only cut, no connector.

VA03

\* Please consider pitch cut.

Flexible light line with uniform emission

## Ready-to-light

DuraNeonFlex is a flexible extruded silicone profile, complete with 120 LEDs per meter strip. The narrow pitch of the chips and Ic technology make DNF a perfect light line, homogenous on all its 10 meters of length. What's best...

it is ready-to-light!

**DNF:** white PC terminals

**DNF-Q:** translucent silicone terminals

\*\* Integrated Circuit

## DURANEONFLEX TOP

### Standard:

The codes in the first column have a standard size of 10 meters each reel and NO connectors attached. Professional rolls of 50 metres can be made to order by adding 5000 at the end of each code.

### Custom cut WITHOUT connector:

If the required length is different from 10 meters, then add 4 digits at the end of the code: cut every 5 cm, max 10 meters.

### Ready to use WITH connector:

Items with connector should add to the chosen code the termination 'EX' and the letter of the selected connector: A - B/D - C, (see examples herebelow), then add the connector price to the price per meter and the single piece processing cost.

## INSTALLATION AND ASSEMBLY DETAILS

DNF are extremely flexible strips but it is important not to force the curvature beyond the specified limits. Installations that do not comply with these instructions cannot be covered by warranty. Take care not to twist the product during installation.

### DNF / TOP

### DNF / VERT

### Connector insertion details

LED chip protections

Insert the protection on top of the strip to avoid squashing the chip

Insert the connector to the back of the strip (if inserted on top of the strip the LED can be damaged)

Add silicone glue in the groove for sealing

## DURANEONFLEX-Q VERT

### Standard:

The codes in the first column have a standard size of 10 meters each reel and NO connectors attached. Professional rolls of 50 metres can be made to order by adding 5000 at the end of each code.

### Custom cut WITHOUT connector:

If the required length is different from 10 meters, then add 4 digits at the end of the code: cut every 5 cm, max 10 meters.

### Ready to use WITH connector:

Items with connector should add to the chosen code the termination 'EX' and the letter of the selected connector: A - B/D - C, (see examples herebelow), then add the connector price to the price per meter and the single piece processing cost.

## INSTALLATION AND ASSEMBLY DETAILS

DNF are extremely flexible strips but it is important not to force the curvature beyond the specified limits. Installations that do not comply with these instructions cannot be covered by warranty. Take care not to twist the product during installation.

### DNF-Q / TOP

### DNF-Q / VERT

### Connector insertion details

First, identify the terminal part that will lead to the power feeder. Peel off the silicone above the bottom layer of PCB, to bare the solder pads. Please work with care, do not scratch or damage the PCB layout, otherwise the fixture will not work!

Insert power cable into the chosen terminal cap. Make sure the end cap is the correct power feeder method as required. Move and adjust the end cap to the right location for appropriate soldering process. Solder cable.

Make sure of the correct polarity, to avoid non-working for the luminary. Good soldering quality should be made in full and firm solder point without cold solder joint. Same process for the RGB colour luminary. Seal with silicone glue.

Apply the glue to the right parts around the terminal as the diagram. Push and fix the endcap onto the terminal, then get rid of residual glue. After 10 minutes the glue's surface can be cured and hard, after 24 hours the glue can be cured completely and achieve the strongest adhesive capacity. The strip should rest flat while the glue is being cured, do not pull or push the end cap. Same process for the end cap.

Mounting complete

# DuraNeonFlex Twist

## TYPE

Flexible light line with uniform emission in two directions.

## CHARACTERISTICS

Flexible light line with continuous lighting: so flexible you can create curves with a minimum diameter of 6 cm and allows twisting of 360° in one meter!

24VDC

Ra >90

Lifetime: internal use >50,000h; external use >35,000h

Warranty: 3 years

IP65 with free wires

## COLOUR OF THE LIGHT

Range of whites:

2700K – 3000K – 3500K – 4000K – 6500K

## MATERIAL

Extremely flexible, impact resistant and weatherproof extruded silicone.

## DIMMABILITY

Dimmable 0-100%

DALI - DMX

Analogue and digital domotic control systems

Push Dali with ZKCDA controllers

CASAMBI compatible

## INSTALLATION NOTES

It is attached to the surface with the clips; can be cut at any point (free cut), all with free wires.

Fitted with different outputs for power supply: see the next pages.

Installation temperature: 0° ~ 35°C; working temperature: -25° +35°C.

## PACKAGE

Packaged in 5 m reels.

## CUSTOM CUT

DuraNeonFlex Twist can be ordered in custom lengths, with a max of 5 meters per electrical connection - with no minimum cut size - without or without the terminals needed for the project (in-line, side, or rear connection).

DuraNeonFlex Twist is the ideal tool to follow the fluid form of contemporary architecture and is able to follow curved paths that change direction in unexpected and surprising ways, DNF Twist can be twisted both vertically and horizontally and may be cut to size at any point making it possible to obtain the exact lengths necessary for any project. Fabricated from high transmittance extruded silicone, it is weatherproof and impact resistant forming unusual effects in creative lighting.

Cutting DuraNeonFlex to size\*:

fixed cost of piece work,  
includes the selected terminal connector.

VA02

fixed cost of piece work,  
only cut, no connector.

VA03

\* Please consider pitch cut.

## DURANEONFLEX TWIST

### Standard

The codes in the table below have a standard size of 5 meters each reel and NO connectors attached. Professional reels with 10 or 50 meters DNF can be ordered upon project by adding '1000' or '5000' at the end of each code.

### Without connectors

If the required length is different from 5 meters, then add 4 digits at the end of the code but consider there is no cut minimum on this item but there is a maximum of 5 meters.

### Ready to use with connector

Items with connector should add to the chosen code the termination 'EX' and the letter of the selected connector: A - B - C, then add the connector price to the price per meter and the single piece processing cost.

Installation temperature: 0° ~ 35°C; working temperature: -25° +35°C.

## PACKAGE

Packaged in 10 m reels.

## CUSTOM CUT

DNF MINI can be ordered in custom lengths, with a max of 5 meters per electrical connection - with no minimum cut size - without or without the terminals needed for the project (in-line, side, or rear connection).

A very slim line of light (8 mm) with no LED dotting, without cut limitations, flexible enough to be able to create 30mm curves and available in 8 colours besides white light: DNF MINI is a small part of an amazing family!

Entirely extruded in high transmittance silicone, weather proof and impact resistant, it is suitable for creating particularly detailed and attractive light patterns, even in a single connection of 10 meters.

The closing terminals are in a translucent silicone allowing the light to pass through to be the same colour as the strip.

Cutting DuraNeonFlex to size\*:

fixed cost of piece work,  
includes the selected terminal connector.

VA02

fixed cost of piece work,

## DALI INTERFACES

### CHARACTERISTICS

Dimming curve expressed as a function of the load, i.e. inversely proportional to the percentage value of the power supply load. If the product is used at full load, the dimming curve is linear from 10 to 100%, if it is used at half load, the dimming possibility is halved, i.e. a dimming on the control side of 50% will produce a real load dimming of 25%.

It is important to distribute the power evenly over the power supplies in the same area of the installation to achieve consistent dimming levels.

# CONTROL INTERFACE TO BE USED WITH DURASTRIP

Dimming and control systems can be used to improve the ambient aspect: they help creating special, different, soft and always lively atmospheres. Moreover, they have an important function of energy saving: by varying the emission and/or activating/deactivating the system or appliances, they allow optimising the presence of solar lighting.

## DALI CONTROLLER FOR DURASTRIP white light

It can be used with all White light Durastrips.

1 channel.

**FLICKER FREE** Improved 4KHz technology; flicker free dimming.

### DALI INTERFACE

The DALI (Digital Addressable Lighting Interface) is a digital protocol interfacing with the power supplies. It is widely used in the lighting field as it provides visible benefits compared to the 1-10V analog control technology (it is essentially a flexible, digital control that allows addressing the single appliances).

The DALI protocol allows defining appliance units and managing the lighting sceneries, to create the right lighting of an ambient according to its use. Different lighting sceneries can be configured and enabled using a simple key, without involving the system wiring.

The DALI protocol is more simple and economic compared to the integrated management systems of a building (building management).

A DALI network can control up to 64 appliances/lamps.

### 1-10V DIMMING INTERFACE

The 1-10V luminous intensity control system runs with analog technology: 1 corresponds to 0% and 10 to 100% of the lamp emission.

The intensity can be adjusted by using the linear curve or logarithmic curve and it is the simplest system to install.

The connection is carried out by 2 polarity wires placed between the power supply and controller. It can be used with active or passive control systems.

### DMX INTERFACE

DMX512, which abbreviation is DMX (Digital MultipleX), is a communication protocol mainly used to control lighting (even LED type), from computers or control units. It is normally used to control colored lighted or white lighted appliances (RGB) with variable temperature.

Thanks to the high transmission speed of the data, the DMX allows making dynamic and even complex sceneries. A DMX network consists in 512 channels; the number of appliances that can be controlled cannot be defined beforehand, as it depends on how many DMX channels each appliance uses. E.g., if every appliance of the DMX network uses 3 DMX channels, the network can contain 170 appliances.

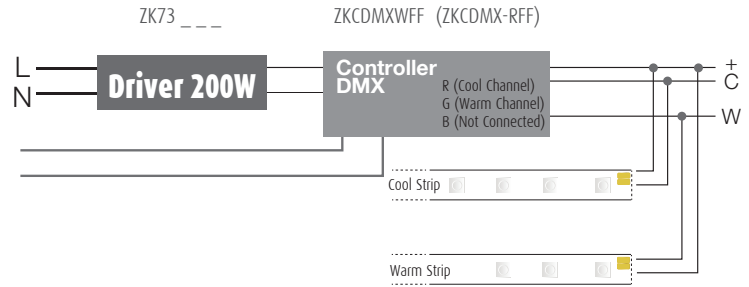

ZKCDMX-R code version: Equipped with RJ45 connector for DMX signal, complete with looping system and remote sensor with plug (20 cm cable). It can be used in a traditional way or with remote control included in the packaging (signal distance 10 mt in free air).

# WALL TOUCH DIMMER - DMX

## TYPE

Dimmers for DURASTRIP white, for DURASTRIP CTC, DURASTRIP RGB and RGB+white.

## CHARACTERISTIC

external interface in tempered glass with high touch sensibility, immediate response to touch and control precision. 4 zones can be controlled separately or synchronised. Conforms with protocol DMX512(1990). Can be used with ZKCDMX, ZKCDMX-R, ZKCDMXW. Dimmer's driver included in the box (220-240Vac / 5Vdc). Easy installation and intuitive use.

## CASAMBI ACCESSORIES

External accessories with simple electric cables make it possible to control Duralamp Light Lines in wireless mode.

### CONTROL MODULE IP20

A wireless control module with a DALI interface. It generates a local DALI bus which makes it possible to connect a LED driver directly to a DALI interface. The module can only be used in a closed system and cannot be connected to an existing DALI network. The module is wireless controlled using a CASAMBI app for smartphones and tablets using Bluetooth 4.0 technology. The devices create an adaptive, secure and reliable wireless mesh network that can control a large number of fixtures in a simple and efficient way. IP20.

	art.	WATT	Max current (A)	Volt IN	Connection	IP	L1	L2	L3	
NEW	<b>1T5349</b>	1,1W	0,6	220-240Vac	Screw	20	37	41	14	1

### GATEWAY DALI/CASAMBI

Gateway DALI/Casambi: a fixture that allows fixtures equipped with mesh Bluetooth Casambi to interface with a traditional DALI system and to be adjusted by a DALI control unit. Inside the usual DALI circuit it is possible to have a maximum of 64 cabled DALI and Casambi wireless devices. It only works with Casambi Evolution networks. The DALI Bridge is transparent in the DALI system, and therefore does not require an address. There is no need for a power supply given that it is supplied directly by the DALI bus.

	art.	Max current	Max peak	Volt IN	Connection	IP	L1	L2	L3	
NEW	<b>1T8173CA</b>	250mA	30mA	9.5V – 22.5V*	Screw	20	40.4	36.3	14	1

Power supply from DALI Bus. DALI Bus max current: 250mA

### CASAMBI WALL SWITCH XPRESS

Xpress is a wall mounted wireless user interface; it can be installed wherever the user chooses thanks to battery power with autonomy of 2-3 years providing direct access to all the most important CASAMBI system control functions. As well as switching the fixtures on and off, Xpress controls dimming, colour temperature change in fixtures equipped with this technology, and control of individual fixtures and lighting scene or sequence management.

	art.	
NEW	<b>1T5350</b>	1

### CONTROL MODULE PWM IP20 4CH (RGBW)

Wireless Bluetooth Dimmer capable of handling constant voltage loads of 12V or 24V subdivided into 4 channels with PWM output. This dimmer must be connected between the 12V or 24V power supply and the constant voltage LED module. The maximum total current that can be supplied by the control unit is 6A (equivalent to a total of 144W) that can be divided between the 4 outputs.

	art.	Max current (A)	Volt OUT	Volt IN	Connection	IP	L1	L2	L3	
NEW	<b>117944</b>	6	12-24V <sub>DC</sub>	12-24V <sub>DC</sub>	Screw	20	72,6	18	30	1

NOTE: total of 6A on 4 channels. Max 72W (12V) 144W (24V)

### TRAILING EDGE DIMMER IP20

A Wireless Trailing Edge / IGBT dimmer managed using Bluetooth 4.0 technology. It works with LED 230 V-AC modules, dimmable LED sources and halogen lamps. It can be installed inside a standard 503 wall switch box, lighting fixtures or ceiling canopies. It can manage systems with a maximum absorption of 150W. The module is wireless controlled using a CASAMBI app for smartphones and tablets or traditional wall switches. IP20.

	art.	WATT	Max current (A)	Volt IN	Connection	PF	L1	L2	L3	
NEW	<b>115351</b>	150W	85-240V <sub>DC</sub>	85-240V <sub>DC</sub>	Screw	0,35	37	41	14	1

### EXTENDER IP20

Extender IP20 allows for wireless control with a DALI interface. It generates a local DALI bus with the capacity to drive up to 64 fixtures and can control groups of fixtures in indoor applications. It is also equipped with a relay that can control non-dimmable fixtures up to a maximum of 6A. It prevents any change to the management features provided by the CASAMBI system.

	art.	WATT	Max current (A)	Volt IN	Connection	PF	L1	L2	L3

## HiVolt

DURASTRIP HiVOLT for direct mains connection provides the advantage of being able to reach a length of 50 metres with power directly from mains electrical supply whilst offering lighting uniformity and colour along the entire length of the strip. Without the inconvenience of a remote LED driver, the strips can be used in surface mounted installations. With a shuko plug the product is IP44 but supplied already cut to the required length with a free wire arrangement, it is possible to achieve an IP65 protection provided the cables are terminated into a suitably rated enclosure making DURASTRIP HiVolt easy to maintain and resist the most common aggressive environments.

## **DURASTRIP HiVolt 120V CCT+DIM-TO-WARM**

Dedicated to 120V: variable colour temperature from 2700K to 6500K, all white shades possible to vary the atmosphere and environment. Version from 1800K to 3000K: Dim to Warm for warm and welcoming atmospheres.

## 05

### CONFIGURATION OF THE "CUSTOM MADE" PRODUCT

Here are the necessary specifications to define the "custom made" HiVOLT DURASTRIP, complete with cable and plug or with free wires.

The following elements must be defined:

#### 1. EXISTING PRODUCT CODE

#### 2. LENGTH OF STRIP SEGMENT

The requested length must take into account the cutting spacing of 20 cm, max 50m single feed.

(ALWAYS CONSIDER THE 20 CM CUTTING SPACE)

If a strip complete with a plug is requested, consider the size of the accessories: see the technical drawing to be sure

#### 3. TYPE OF CONNECTION

## 06

Choice of Colour Temperatures

## BINNING

ANSI/SDCM: 3 step.  
2700K - 3000K - (3500 - 120V) - 4000K

## DIMMABILITY

Dimmable with DMX dimmer code ZKCDMX-HV.

## CONNECTIONS

Up to 50 metres.  
HiVolt IP65 strips are supplied ready to be installed complete with a cable of 1.5m (black) equipped with a Schuko plug (full collar Schuko IP44) or supplied with free wires (IP65) 1.5m.  
In addition to the value of the goods ordered consider the cost of cutting and installing components for every single piece (cable, fuse, Schuko plug and cut).

## ASSEMBLY

We recommend to order the assembly clips considering to use 4 clips for every metre. Any particular requests will be specified in the project form.

## PACKAGE

Supplied already cut to measures.  
For custom product cut to specific lengths see page 11, 322.

## ACCESSORIES

Fixing bridges.

Cutting DURASTRIP HiVOLT to size\*:

fixed cost of piece work

VA00

\* Please consider pitch cut. Includes a 1.5 m cable.

DURASTRIP HiVolt differs from similar products due to its extreme sturdiness: the protective sheath is reinforced by a double extrusion layer which provides a solid and highly resistant compacted quality.

DURASTRIP HiVolt for direct mains connection provides the advantage of being able to reach a length of 50 metres with power directly from mains electrical supply whilst offering lighting uniformity and colour along the entire length of the strip. Without the inconvenience of a remote LED driver, the strips can be used in surface mounted installations. With a Schuko plug the product is IP44 but supplied already cut to the required length with a free wire arrangement, it is possible to achieve an IP65 protection provided the cables are terminated into a suitably rated enclosure making DURASTRIP HiVolt easy to maintain and resist the most common aggressive environments.

DIM TO WARM: 1800K-->3000K

## BINNING

ANSI/SDCM: 3 step.

## DIMMABILITY

Dimmable ELV

## CONNECTIONS

Up to 50 metres with a single power supply.  
HiVolt IP65 strips are supplied ready to be installed complete with a cable of 1.50 m (black) equipped with a Schuko plug (full collar Schuko IP44) or supplied with free wires.  
Strips can be supplied also with IP40 wiring.  
In addition to the value of the goods ordered consider the cost of cutting and installing components for every single piece (1.5 m cable, fuse, Schuko plug if required and cut).

## ASSEMBLY

We recommend to order the assembly clips considering to use 4 clips for every metre. Any particular requests will be specified in the project form.

## PACKAGE

Supplied already cut to measures.  
For custom product cut to specific lengths see page 11, 322.

## ACCESSORIES

Mounting clips.

Mains voltage strips, 120V with possibility of varying the colour temperature.

2700K to 6500K version to be able to take advantage of all of the potential white shades and vary the atmosphere of the areas.

Version from 1800K to 3000K for warm, welcoming and relaxing atmospheres: this strip warms up the colour of the light, lowering the colour temperature.

## CONNECTIONS

Maximum connection length: see table.

## ASSEMBLY

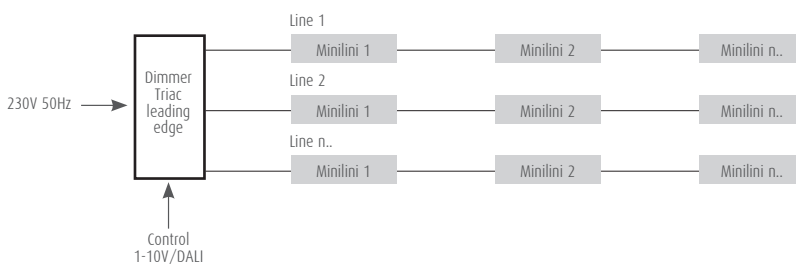

Choice of surface mounting brackets with different fixed angles - 15°, 30°, 45° - or with adjustable brackets of different heights to be ordered with separate codes.

Minilini is a mains voltage architectural linear projector for surface mounted installation. It is constructed from extruded aluminium with an opal polycarbonate cover and is rated IP65 making it suitable for exterior environments: 40 mm wide and 295 or 585 mm long and available in various beam angles and wattages.

Accessories include a selection of fixed and angled surface mounting brackets providing installation uniformity or adjustable brackets for further flexibility.

Minilini is complete with integrated protection from voltage spikes.

## CONNECTIONS

Maximum connection length: 5 m.

## ASSEMBLY

Choice of surface mounting brackets with different angles:  
15°, 30°, 45°.

Modular system composed of elements connected by a flexible cable. The advantage of Microlini is the possibility to arrange the modules in a nonlinear way and to bring light to irregular surfaces, particularly complex cove lighting or to signage. The different spring clips provide the possibility to direct the light with angles that can be different even for every single element.

Composed of a 6.35 cm (2.25") extruded aluminium body complete with a 0.5 W LED strip, a polycarbonate screen and aluminium end caps. They are ready to use and allow for quick and durable installation. The connection cable is 5 cm long and makes it possible to position the elements at angles very close together.

# TONDO LUMINOUS PROFILE

## TYPE

Extruded aluminum profile complete with screen and high efficiency LED strip: optimal replacement of T5 tubes.

## CHARACTERISTICS

Supplied on a customized project base, complete with input and output M / F wiring. The profile is produced with included 12V or 24V strip; light colour selectable among those of the DURASTRIP PRO. Performance: 16W / m; 1440lm / m.

## MATERIAL

Extruded aluminum finned body for optimal heat dissipation; polycarbonate cover.

## INSTALLATIONS

Specially structured for the typical retail shelves.

## NB

Contact the sales force for MOQ and light colour customizations.

## CODES' STRUCTURE

art.	Profile length in cm
<b>04U2414300100</b>	= (1 meter)
<b>04U2414400060</b>	= (60 cm)

Those in the table are examples of how to compose the code.  
Code 04U= Tondo profile; 24= Volt; 14=watt; 30=colour of the light;  
the last 4 digit specify the desired length in centimeters (0100=1 meter);  
max length 2,4 mt. Cutting distance: every 10cm.

# UNIVERSAL and ESSENTIALS PROFILES

# PROFILES

## Universal

### CHARACTERISTICS

Aluminium profiles for surface, recessed or suspension installation. They house both IP20 and IP68 strips up to 18 mm in width.

### CAN BE USED WITH LED STRIPS WITH A MAXIMUM WIDTH:

18 mm.

### MATERIALS

6063 Aluminium profile with a white PC screen.

### ACCESSORIES INCLUDED

Every 2 metre bar is complete with 1 set of end caps (with and without holes) and 1 set of mounting clips.

### OPTIONAL ACCESSORIES

Screen with spot, flood or asymmetrical effect.  
Adjustable brackets and suspension cables for the corner version.

Universal profiles can be produced on request with a white finish.

Universal profiles are the most practical and versatile solutions to house LED strips up to 18 mm in width in the most common installations: surface, recessed and corner. Equipped with a compartment to accommodate cables they make allow for easier and 'cleaner' installations.

The corner version is very versatile: thanks to two very small brackets it can become a surprising suspended profile with a very thin blade of light!

## PRAN-U CORNER PROFILE

### CHARACTERISTICS

Aluminium profile for surface or suspension installation with special brackets and cables. Houses both IP20 and IP68 strips up to 18 mm in width. Equipped with a compartment to accommodate cables.

### CAN BE USED WITH LED STRIPS WITH A MAXIMUM WIDTH:

18 mm.

### MATERIALS

6063 Aluminium profile with a white PC screen.

### ACCESSORIES INCLUDED

Every 2 metre bar is complete with 1 set of end caps (with and without holes) and 1 set of mounting clips.

### MOUNTING

Surface. Equipped with a compartment to pass cables through.\*

### PACKAGE

Supplied in packages of 5 bars, each one measuring 2 meters, complete with screen and accessories. Replacement accessories available with a separate code. Screens with different beam openings, spot, flood and asymmetrical available to replace the standard screen it is equipped with.

Cutting Universal and Essential profiles to size\*:

fixed cost of piece work

VA03

\* Includes mounting accessories.

\* This profile can be suspension mounted by using the steel slides and suspension cable kit that are available with a separate code. The slides can also act as blocks to join two adjacent profiles.

## Essentials

### CHARACTERISTICS

Aluminium profiles for surface, recessed or suspension installation.

### MATERIALS

6063 Aluminium profile with a white PC screen.

### ACCESSORIES

Clips and end caps are Included in the packaging.

Essentials profiles are easy to use, best seller profiles. Profiles of compact dimensions but able to house IP20 or IP68 strips (IP68 connectors remain out of the profile), for surface mounted, recessed or corner installation with the great advantage of having absolutely competitive costs and minimum dimensions.

PREDESO is also part of this range: a profile that immediately becomes a fixture with different installation methods. In the suspended version PREDESO offers not only direct lighting but also the possibility of indirect lighting.

## SURFACE PROFILES: PRAP

### CHARACTERISTICS

Aluminium profile for surface mounting installations. Aluminium profiles allow for a more stable installation, in case of linear installations.

Recommended for indoor and outdoor (protected) applications and for high power strips in order to better heat dissipation.

### CAN BE USED WITH LED STRIPS WITH A MAXIMUM WIDTH:

12 mm (PRAP20) and 15 mm (PRAP68).

### MAXIMUM POWER

20W/m 20 Series

25W/m 68 Series

### MATERIALS

6063 Aluminium profile with a white PC screen.

### ACCESSORIES

Every 2 metre bar is complete with 2 sets of end caps (with or without holes) and 2 sets of mounting clips.

### MOUNTING

Recessed.

### PACKAGE

Supplied in packages of 5 bars of 2 meters complete with screen and accessories.

### IP68/IP65

IP65 or IP68 strips the connectors rest outside the profile.

## DOUBLE EMISSION ARCHITECTURAL PROFILE

### TYPE

Linear architectural profile configurable in direct, indirect emission or both, for high levels of light emission.

### CHARACTERISTICS

The direct emission is configurable with the use of 1 to 4 strips; indirect emission foresees two strips. Compartment inside the profile suitable for the insertion of the power supply and dimmer. Possibility of on/off switching and dimming separate for direct and indirect lighting.

### INSTALLATION

Mounting on ceiling for unidirectional or suspended for unidirectional or double emission.

Cutting Project profiles to size\*:

# PROJECT PROFILES

## ↘ Covers for light

It is often said that the only limit to using Led strips is the imagination. After having 'designed' them strips are then chosen according to the lighting function they have to perform, then they are positioned and installed according to the type of strip, materials, the architecture and application environment and last but not least, they must be protected so they last over time.

page 237  
P01B

page 304  
P08B

page 105  
DURANEONFLEX

These profiles allow for a professional installation often with innovative solutions where it would be difficult to install other types of fixtures. Our range provides an extensive choice of sizes in terms of depth of strip from the diffuser, width, fixing type, surface or recessed mounted, adjustable, flexible, trimless, suspension and inground walk-over or drive-over.

## ↘ Decorative and functional lighting

There are various ways to highlight architectural elements: some are purely emotional, decorative and eye-catching while others play a functional role. Where it is possible to play with different lighting solutions simultaneously or selectively,

those lines of light designed with the idea of light brush strokes, become functional not only to light but also to create unexpected and unforgettable environments.

## ↘ A solution for every environment

It is important to have a series of tools to hand such as profiles that can meet the most demanding requirements and provide solutions for various installations: envelop a circular construction with light for example, suggest a greater depth of field than what is actually present and illuminate a splendid vaulted ceiling from a limited thickness.

It is true that lines of light have revolutionised lighting and it is thanks to profiles and certain processes applied to them that those lines of light have been inserted into various contexts which are at times extremely difficult and at the limit of technological challenges.

## Lighting

# PROFILES

Extruded profiles specifically designed to ensure the best possible protection for LED strips, improve heat dissipation, ensure they remain permanently and securely in various environments and to facilitate installation and maintenance.

This range of profiles for architectural lighting is composed of products complete with accessories necessary for their installation.

ALUMINIUM  
PROFILES

## PROFILES

**ALUMINIUM 6063** = Aluminium-Magnesium-Silicon alloy ideal for even complex profile extrusion given its exceptional mechanical characteristics.

The excellent degree of finish is coupled with high resistance to atmospheric corrosion and good resistance to marine corrosion.

Density: 2.70 kg/dm<sup>3</sup>

Melting temperature: 600 °C

Thermal conductivity at 20 °C: 1,72W/cm<sup>2</sup>K

PMMA  
PROFILE

**PMMA** = Extruded polymethylmethacrylate. Excellent aesthetic qualities, excellent planar capacity and thermoformability, optical purity, anti-yellowing and glueable. Used to cover profiles that for location and exposure to the elements must protect the LED strips: sealing the ends IP68 is obtained. Depending on the type of profile IK10 resistance is obtained. Consider a reduction on light emission of the strip of 15%.

Absence of longitudinal torsion on the profile  
Perfect mechanical quality on the length

PC  
SCREEN

## SCREENS

**PC** = White polycarbonate. Used to cover all profiles that do not need to have any particular resistance to crushing.

Consider a reduction on light emission of the strip of 10%.

PMMA  
SCREEN

**PMMA** = Extruded polymethylmethacrylate. Excellent aesthetic qualities, excellent planar capacity and thermoformability, optical purity, anti-yellowing and glueable. Used to cover profiles that for location and exposure to the elements must protect the LED strips: sealing the ends IP68 is obtained. Depending on the type of profile IK10 resistance is obtained. Consider a reduction on light emission of the strip of 15%.

PS  
SCREEN

**PS** = Polystyrene. Good mechanical properties, resistant to a variety of aqueous chemical agents. Very good electrical and thermal insulator and is it practically anhygroscopic.

CLIP

## ACCESSORIES

Depending on requirements the clips supplied are made of plastic or stainless steel. Depending on requirements the end caps supplied are also made of plastic or stainless steel.

SUSPENSION  
CABLE

### ACCESSORIES INCLUDED

Usually the end caps are supplied in pairs, one with a hole to allow the cable to pass through and one with a closed end. Unless otherwise indicated. In every pack there are a pair of end caps for every metre of profile: a 2 m profile will have 2 sets of end caps and 2 sets of clips (if they are part of the product); a 3 m profile will have 3 sets of end caps and 3 sets of accessories.

END CAPS

ADJUSTABLE  
BRACKET

# PROFILES

## HOW ARE THEY INSTALLED?

01

### FLEXIBLE AND CORNER SURFACE PROFILES

Aluminium profiles can be attached to surfaces in two ways: drilling holes in them and screwing them directly to the surface or by using the clips supplied. When using the clips 2 clips for every metre of profile (supplied) should be used. If it necessary to cut the profile into smaller segments order the accessories separately.

02

### PLASTER-IN PROFILES

To install plaster-in profiles check the size of any channels on the drawings. All plaster-in profiles can be embedded flush with the surface to ensure the 'hidden' effect of the installation.

03

### SUSPENSION PROFILES

Suspension profiles are all equipped with a pair of adjustable suspension cables for every metre of profile. The cable is installed directly on the profile (1) or using a special bracket (2).

## CABLING

### 01

## CONNECTIONS

The majority of profiles are equipped with end caps, usually 1 with a hole to allow the cable to pass through and one with a closed end.

Depending on the size of the profile and the type of installation it is possible to pass the cable through the end or the side.

### 02

Preparing the end of the profile with a cable passing through the end

### 03

Preparing the end of the profile with the cable exiting the side through the end cap

# PROFILES

project

## IP RATING

01

### IP20, IP65 OR IP67?

All profiles have an IP20 rating. The simple end cap closing mechanism does not make it possible to achieve higher IP protection unless the strip positioned inside is itself protected from dust and water. If the ends of the profiles are resinated and the strip is equipped with sufficient cabling then the profile can be used as IP65 (protected from low pressure water jets) or IP67 (protected from brief immersion in water).

02

### IP65: SEALING ON SITE

Profiles made of extruded PMMA, whether they have an IP20 LED strip or not can be made watertight. Sealing them with silicone profiles containing LED strip can be made watertight.

03

### IP68: MAKING TO ORDER IN THE FACTORY CUSTOM MADE PROJECTS

In the event of significantly sized projects it is possible to request the profiles are sealed to obtain IP68.

All strips selected will be connected with a cable equipped with an IP68 jack and all profiles of the requested size will be sealed to obtain IP68 protection.

# PROFILES

## Slim Surface

Slim profiles create extremely thin and surprising lines of light. They were designed to 'wear' new DURASTRIP EXTRANARROW - 5 mm width for white light and 6 mm for the RGB version- and provide hitherto unimagined solutions.

Also available with versions with increased depth: allowing for excellent light uniformity even when using strips with large LED spacing.

## CHARACTERISTICS

Compact profile for surface or flush recessed installation.

## CAN BE USED WITH LED STRIPS WITH MAXIMUM WIDTH:

8 mm.

## MAXIMUM POWER

10W/m

## MATERIALS

6063 aluminium profile with white polycarbonate screen.

## ACCESSORIES INCLUDED

Every 2 metre bar is complete with 2 sets of end caps (with and without hole) and 2 sets of mounting clips.

## INSTALLATION

Surface or recessed with suitable clips. Cabling can be in line with the profile, at the bottom or on the side.

## PACKAGE

Supplied in packages of 5 bars, each one measuring 2 meters complete with screen and accessories. Spare accessories for additional cutting available with a separate code.

# PROFILES

## Surface

From the extremely thin version suitable for installation in light panelling with the possibility of a 90° angle to the version with an asymmetrical lens and corner profiles: the choice depends on the type of support and the effect required. In the corner profiles there is a 'classic' version as well as a 'grooved' version: this creates a new corner surface between the two supporting walls: as well as acting as a compartment to pass cables through, the lateral borders finish the junction between the two perpendicular walls perfectly. Extremely decorative are the two extremely compact (10 mm each side) versions made entirely of PMMA: decorative elements that are extremely elegant and impressive.

# PROFILES

## Flexible

Flexible profiles with different shaped lens-diffusers and the positioning of the LED strip: made of high impact resistant PMMA they provide customised solutions depending on the required lighting effect with the advantage of lengths of up to 20 metres.

They can house standard size LED strips (10 - 12 mm). For faster solutions with flexible profiles complete with LED strips and wire terminals see the section on DuraNeonFlex.

# PROFILES

## Adjustable

A small section for adjustable and directional profiles. Dimensions so small that prove decisive in small spaces that nevertheless require important lighting. Typically used on cornices at the basis of vaulted ceilings in churches or to create attentional elements on ceilings or roofs. They house strips up to 12 mm wide allowing for the use of high luminous impact DURASTRIP PRO. The directional model remains on the surface and provides an inclination of around 30°.

## ADJUSTABLE PROFILES: P04C

### CHARACTERISTICS

Profile adjustable to around 30° with a wall-washer function for surface installation: the inclined support is fixed and is part of the profile.

### CAN BE USED WITH LED STRIPS WITH MAXIMUM WIDTH:

14 mm.

### MAXIMUM POWER:

30W/m

### MATERIALS

6063 aluminium profile with white PMMA screen.

### ACCESSORIES INCLUDED

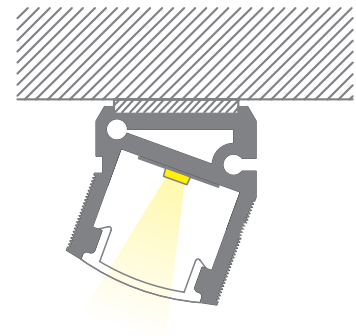

Every 3 metre bar is complete with 3 end caps (with and without hole)

### INSTALLATION

Surface installation with double-sided tape (not supplied). Cabling can be in line with the profile or exit the bottom of the profile.

### PACKAGE

Supplied in packages of 5 bars, each one measuring 3 meters complete with screen and accessories. Spare accessories available with separate code.

# PROFILES

## Recessed

Each to their own recessed! Thin surfaces? Po2H only needs a 6 mm recess and can be completed with accessories to be installed with 90° angles. The P03H profile makes it possible to create lines of light of 11 mm and is equipped with springs to attach to panels on false ceilings.

Every model resolves an installation necessity while providing distinctive lighting solutions: for example the P08H has a wide 6 cm screen and provides 3 different possibilities to distance strips from the diffuser for different lighting effects.

# PROFILES

## Recessed Floor

Recessed inground profiles produced in different sizes to solve different needs: they are all designed with an extruded aluminium profile that houses an extruded PMMA profile where the strip is inserted. The thick extruded aluminium profile ensures stability and mechanical protection of the lighting body; the internal PMMA profile is sealed to obtain the necessary degree of protection against water.

The P06G profile has a particular feature: it can be mounted both 'without an edge' and turned upside down with the edge facing outwards to create a different finish on the line of light. For walk over installation the product already available in the catalogue is joined by a profile that is structurally similar but in a different size.

# PROFILES

## Plaster-in Recessed

The range of recessed profiles for plasterboard is extended significantly with decorative and functional versions that really 'make the difference' in an architectural project!

Of particular interest are the profiles that create a line of light on the edge or profiles those that fill concave or convex corners with light or that make it possible to finish a wall with a thin parallelepiped of light!

# PROFILES

## Suspension

Suspension profiles is a limited definition: these extruded profiles become fixtures immediately with remarkable visual impact! From the historical Up&Down PRDES0 model to versions with square screens in different sizes and splendid circular section profiles made almost exclusively of the diffuser element!

If you think of them installed in long lengths – up to 3 metres – and with the multiple lighting possibilities they can house – strips with different temperatures for different times of day for example – you can immediately see the potential of the extruded profiles in this section.

## DOUBLE EMISSION ARCHITECTURAL PROFILE

### TYPE

Linear architectural profile configurable in direct, indirect emission or both, for high levels of light emission.

### CHARACTERISTICS

The direct emission is configurable with the use of 1 to 4 strips; indirect emission foresees two strips. Compartment inside the profile suitable for the insertion of the power supply and dimmer. Possibility of on/off switching and dimming separate for direct and indirect lighting.

### INSTALLATION

Mounting on ceiling for unidirectional or suspended for unidirectional or double emission.

Cutting Project profiles to size\*:

fixed cost of piece work

VA04

\* Includes mounting accessories.

art.	Description	L	80119058	
<b>PRDES0</b>	Double emission aluminium profile	1220	39970	1
<b>PRDES0-SL</b>	Rear support for surface mount	1220	39987	1
<b>PRDES0-FL</b>	Front screen in flat opal polycarbonate plate	1220	39994	1
<b>PRDES0-FLR</b>	Couple of opal polycarbonate rear screen	1220	40020	1
<b>KTPRDES0-FL</b>	Set of two side caps flat screen	-	40068	1
<b>KTPRDES0</b>	Suspension kit	-	40051	1

**PRODUCT COMPOSITION**

The aluminium profile is completed, depending on the application chosen, with screens (flat front and rear pair of screens for indirect emission), side closure caps and suspension kit. For ceiling mounting the rear support is required, code PRDES0-SL, on which the profile can be attached.

## DECORATIVE SUSPENSION PROFILES: P07A

### CHARACTERISTICS

Surface or suspension installation profile. Slightly extruded rounded diffuser. The dimensions of the profile, 5 x 6 cm, and the 180° beam opening mean that this profile can be installed anywhere and responds to many needs using the same aesthetic element.

### CAN BE USED WITH LED STRIPS WITH MAXIMUM WIDTH:

40 mm.

### MAXIMUM POWER

40W/m

### MATERIALS

6063 aluminium profile with white polycarbonate screen.

### ACCESSORIES INCLUDED

Every 3 metre bar is complete with 3 sets of end caps (with and without hole) and 3 sets of fixing brackets (necessary for surface and suspension installation) and 3 sets of suspension cables.

### INSTALLATION

Surface or suspension. The profile housing allows for some drivers to be inserted: always check dimensions and electrical loads.

### PACKAGE

Supplied as a single 3 metre bars complete with screen and accessories. Spare accessories available with separate code.

Thanks to the possibility of using different strips the profile becomes a fixture that can provide different light temperatures, to be used depending on the activities carried out in that space at different times during the day.

Driver housing code ZK73100-SL

# PROFILES

## Decorative

Decorative profiles with functional purposes. For lighting walls with double emission with which it is interesting to play with different shades of Up&Down light, or the profile that makes it possible to hide the lamp in a special duct directed downwards.

The skirting board profile, perfect as a visual guide in corridors, can also house the cables necessary in the space. The stair profile, usually used in cinemas or theatres, provide a double installation possibility to first install the source and then the lighting solution. Po8B is a very versatile profile because it can be installed with an upward, downward or lateral emission: given it is surface mounted it adapts to any existing situation (thanks also to the cable compartment) and is often chosen for its robustness for applications in under grooves, railings etc...

## WARDROBE PROFILES: P02G

### CHARACTERISTICS

Profile specially designed for wardrobes. The P02G version is the basic product, with smooth sides and fixed housing for the LED strip. **Maximum load: 10 kg/m.**

### CAN BE USED WITH LED STRIPS WITH MAXIMUM WIDTH:

10 mm.

### MAXIMUM POWER:

15W/m

### MATERIALS

6063 aluminium profile with white polycarbonate screen.

### ACCESSORIES INCLUDED

Every 3 metre bar is complete with 3 sets of end caps and 3 sets of supports for wall installation.

### INSTALLATION

Laterally with wall brackets or top support with the right bracket.

### PACKAGE

Supplied in packages of 5 bars, each one measuring 3 meters complete with screen and accessories. Spare accessories available with separate code; bracket for ceiling installation available with a separate code.

Cutting Project profiles to size\*:

fixed cost of piece work

VA04

\* Includes mounting accessories.

<b>P02/03G-A-FS</b>	3 sets of metal brackets for ceiling installation (dim. 71 mm h) (1 set for every metre is recommended)	912918	1

## WARDROBE PROFILES: P03G

### CHARACTERISTICS

Aluminium profile specially designed for wardrobes, knurled sides; complete with a guide to insert the strip into. **Maximum load: 10 kg/m.**

### CAN BE USED WITH LED STRIPS WITH MAXIMUM WIDTH:

8 mm.

### MAXIMUM POWER:

15W/m

### MATERIALS

6063 aluminium profile with white polycarbonate screen.

### ACCESSORIES INCLUDED

Every 3 metre bar is complete with 3 sets of end caps 3 sets of supports for wall installation.

### INSTALLATION

Laterally with wall brackets or top support with the right bracket.

### PACKAGE

Supplied in packages of 5 bars, each one measuring 3 meters complete with screen and accessories. Spare accessories available with separate code; bracket for ceiling installation available with a separate code.

# WARDROBE AND HANDRAIL PROFILES: P04D

## CHARACTERISTICS

Considerably thick profile with a circular section of 30 mm. Can be used in wardrobes, handrails and as a decorative element. The profile can rotate 180° on supports to position the light where necessary.  
**Maximum load: 20 kg/m.**

## CAN BE USED WITH LED STRIPS WITH MAXIMUM WIDTH:

12 mm.

## MAXIMUM POWER:

30W/m

## MATERIALS

6063 aluminium profile with white polycarbonate screen.

## ACCESSORIES INCLUDED

Every 3 metre bar is complete with 3 sets of end caps and 3 sets of supports for wall installation.

## INSTALLATION

Laterally with wall brackets or top support with the right bracket.

## PACKAGE

Supplied in packages of 5 bars, each one measuring 3 meters complete with screen and accessories. Spare accessories available with separate code; bracket for ceiling installation available with a separate code.

Can rotate 180°

# Personalised service

# PERSONALISED SERVICE

## ↘ Ready to install

A personalised service is provided for all light ranges and profiles in this catalogue. Every process entails a fixed price that must be added to the cost per metre of the strips or profiles to be cut to size. Also consider the possibility to insert strips in profiles:

	<b>Cutting DURASTRIP HiVOLT to size* (includes a 150 cm cable):</b>
VA00	fixed cost of piece work
	<b>Cutting DURASTRIP to size* (includes a 20 cm cable):</b>
VA01	fixed cost of piece work
	<b>Cutting DuraNeonFlex to size* (includes a 30 cm cable):</b>
VA02	fixed cost of piece work
	<b>Cutting Universal and Essential profiles to size (includes mounting accessories) :</b>
	<b>Cutting DuraNeonFlex to size (no terminal)*:</b>
VA03	fixed cost of piece work
	<b>Cutting Project profiles to size (includes mounting accessories):</b>
VA04	fixed cost of piece work
	<b>Assembly of strips onto profiles:</b>
VA05	fixed cost of piece work
	EXAMPLE:
	<b>Cutting DURASTRIP to size inserted in a Universal or Essential profile (for every piece):</b>
VA01	fixed cost of cutting the strip
VA03	fixed cost of cutting the Universal or Essential profile
VA05	fixed cost of assembling the strip +profile (for every strip)

\* Durastrip and DuraNeonFlex must be cut by respecting the cutting pitch distances for each type.

Other particular processes such as resins, cables of specific lengths etc, must be agreed with the sales force on a project basis. The personalised service is subject to a minimum order: your local sales contact or our headquarters in Florence will evaluate the options available with you depending on the size of the project and required production time.

# Technical Data

# KEY

## LED WARRANTY SPECIFICATIONS KEY - Warranties on all LED fixtures and LED lamps:

<b>G3</b>	Up to 3 years (4000h/year)*	*4000h = 11h a day x 365 days. Without limitations on the duration of use for the first year, provided the observance of the installation conditions.
<b>G4/h24</b>	Full Guarantee 4 years (24h/24h)	h24, provides Total Warranty! The winning element for great projects.
<b>G5/h24</b>	Full Guarantee 5 years (24h/24h)	h24, Total Warranty up to 5 years use!

The specific guarantee that each item enjoys is clearly indicated in the catalog and is subject to compliance to the limitations of use. For details, refer to [www.duralamp.it](http://www.duralamp.it) or contact the sales force.

**PROJECT** The articles identified as PROJECT are high-tech articles. Stock is often limited to a few demonstration items and production is activated for specific projects and quantities.

## TABLE PAGES KEY

<b>W</b>	Rated watts for lamps or fixtures
<b>V</b>	Lamp or fixture voltage
<b>lm</b>	Lumen: unit of measurement of the flux emitted by a lamp or fixture. In the case of DURALAMP'S fixtures it indicates the real emission of the fixture in stable conditions. This data is the same used in the photometrics for lighting calculations.
<b>K</b>	K= Kelvin colour temperature indicated in Kelvin.
<b>COLOUR NM</b>	Colour in nanometres, unit of spatial measurement of wavelengths of visible/invisible radiation.
<b>PF</b>	Power Factor
	Beam opening
<b>Ø/L1/L2/L3</b>	Diameter and other dimensions expressed in mm except where otherwise indicated.
	Weight of single item article in grams (except where otherwise indicated)
	Minimum packaging: complying with packaging quantities when ordering speeds orders and ensures greater safety of goods. The quantity indication "1/xx" means that the price refers to the single piece.
	Class I Fixture- Fixture with protective earthing
	Class II Fixture - Fixture with double insulation, no earthing required
	Class III Fixture - Low voltage fixture, no earthing required
	Can be used with a dimmer. A list of compatible dimmers is found in individual product files on the web site.
	Not to be used with a dimmer.
<b>Ra&gt;XX</b>	Colour Rendering Index
<b>XX000h</b>	Operating life in hours indicated as L70 or L50, always measured at 25° room temperature AT. The lifespan is modified substantially with a rise in temperature.

# KEY

	Driveways
	Walkable
	Operating life of a LED fixture or lamp maintaining the indicated flux: L70= 70% flux; L50= 50% flux.
	IK Code, International Protection Marking, classifies and rates the degree of protection for light fixtures against external mechanical impact. IK01 0,15 Joule IK02 0,20 Joule IK03 0,35 Joule IK04 0,5 Joule IK05 0,7 Joule IK06 1,00 Joule IK07 2,00 Joule IK08 5,00 Joule IK09 10,00 Joule IK10 20,00 Joule

	IP Code, International Protection Marking, classifies and rates the degree of protection for light fixtures against the intrusion of solid particles (first number) and water (second number). IP20 protected against solid objects up to Ø 12 mm. IP23 protected against solid objects up to Ø 12 mm and sprays of water. IP40 protected against solid objects over Ø 1 mm. IP43 protected against solid objects over Ø 1 mm and sprays of water. IP44 protected against solid objects over Ø 1 mm and splashed water. IP54 protected against dust and splashed water. IP55 protected against dust and low pressure jets of water. IP65 Totally protected against dust and low pressure jets of water. IP66 Totally protected against dust and strong jets of water. IP67 Totally protected against dust and temporary immersion. IP68 Totally protected against dust and immersion in water (with an indication of the permitted depth in metres).
---	---

	IP rating of the internal housing side (VI) and Optic side IP rating (VO)
---	---

All measurements are expressed in mm except where expressly indicated.

<b>NB</b>	Available on order: the message "Available on order" often appears in the catalogue. We've added it to offer our customers the broadest choice option. Careful though: if an article is available "on order", it means that it is not readily available in stock and only minimum quantities are available for purchase. We therefore recommend that you contact sales for further details.
-----------	---

	<b>CERTIFIED QUALITY</b> All Targetti powered by Duralamp products are CE marked, ie they comply with all applicable European Directives. The UL mark is issued after certification of the product by third parties such as UL, an independent, non-governmental and non-profit organisation whose mission is to ensure that products conform to standards set by ANSI, the American National Standards Institute. UL certification is therefore a Quality and Safety mark and is required for products to be used in the United States and countries that make reference to the same standards.
	
	The EAC mark is the Euroasian Conformity mark required for exporting products to the Customs Union of Russia, Belarus, Armenia, Kazakhstan, Kyrgyzstan. It is comparable to the CE mark and refers to the declaration of compliancy to the technical standards required by the Eurasian Customs Union.

Targetti e Duralamp operates under ISO 9001, an international reference standard for quality management of all company processes.

# TECHNICAL ANALYSIS

lm

## FLUX AND EFFICIENCY

Luminous Flux and Efficiency represent the key information for the evaluation of the performance of a product. What do they represent exactly? Luminous flux represents the emission of the LED source, that is the total amount of light produced by the light source. Efficiency represents the ration between the emission and the power absorbed by the source, that is the total amount of emitted light divided per the energy consumed by the LED source. Nowadays there is not a sole way of publishing these data, each company on the market makes its own choice. This means that catalogues of different companies publish different kinds of information, ranging from the data declared by LED producers to values referable to the LED source in peculiar conditions, but also to values that take into account the "loss" due to reflectors, lenses, drivers and so on. In general, the most reliable data is the value measured on the fixture in its effective usage conditions. In order to let our customers have a clearer idea of the declared data, Duralamp specifies for each LED fixture both its effective flux/efficiency values and the values directly referable to the source, as declared by the producer. The purpose of this methodic choice is to simplify the understanding of the data, and, consequently, to provide our customer the immediate possibility of comparison among Duralamp lighting fixtures and those by other brands. The rapid technical progress of LED sources results in continuous changes in terms of luminous flux and, consequently, efficacy. The information provided by the catalogue should therefore be referred to the date of publication - for regularly updated information please visit the site web.

L70

## LED LIFESPAN

LED lamps, unlike traditional lamps do not suddenly stop working but gradually decrease their initial flow unless there are defects or electric shocks. A LED lamp is considered to be no longer functioning it reaches 70% of their initial flow (L70). Life tests are performed following standard IES LM-80. The life span of LED lamps is strongly influenced by the lamps operating temperature once they are installed in fixtures. Duralamp fixtures are designed to have a very low LED operating temperature to ensure the lamps have a very long lifespan.

According to the IEC / PAS 62717 standard, the useful life of a LED can be defined with an additional parameter, for example 50'000h L80B10, meaning the period of time (50'000h) in which 10% (B10) of the LED products of the same type has gradually fallen below 80% of the initial nominal flux.

L80 B10

Tc

## TEMPERATURE AND PERFORMANCE

The working temperature of a LED source has a significant effect on its useful life, maintenance of luminous flux and efficiency. Correct temperature management, i.e. thermal management of the power in use is a crucial factor in ensuring the performance and reliability of products.

The main characteristic to determine reliability of a product and consistency of performance is measuring the junction temperature (Tj), that can be measured indirectly as luminous flux and the useful life are linked to this parameter. Tj values between 60°C and 90°C allow you to have products with high reliability, performance and estimated lifespans that adhere to market demands. Careful attention must be paid when reading the declared data given that LED manufacturers provide data on the flux at a temperature of Tj 25°C, a condition that is not physically possible for normal use where the LED source is turned on and tested in a fraction of a second and does not produce any heat. Duralamp products are measured and characterised for thermal stability to provide real data on everyday use for the catalogue and users. Well-designed fixtures that ensure proper dissipation also ensure constant flow, colour and spectrum parameters as well as reliability and durability in the declared lifespan.

## COLOUR CONSISTENCY

LED lamps have extensive production tolerances in relation to chromaticity. For years Duralamp has only used lamps with colour consistency that is measured using the MacAdam Ellipse system. This allows for absolute repeatability of the colour characteristics compared to the binning based system. LED lamps used by Duralamp are at least 3-steps of MacAdam (3SDCM).

Ra

## COLOUR RENDERING INDEX CRI or Ra

The colour rendering index CRI indicates the ability of a light source to reveal colours faithfully. Lighting a coloured object with two sources with different CRI will reveal different colours depending on the source used. It is important not to confuse the CRI with data relating to the colour temperature of a source (expressed in K); two sources with the same colour temperature can have different colour rendering indexes. The CRI strongly influences the efficiency of a LED source and many times lighting designers have to choose between the quality and quantity of light.

The LED sources that are fitted in products in the Duralamp collection normally have a colour rendering index that reaches CRI 85. In some case there are also sources with a high colour rendering index (CRI>95).

TM30

## New TM30 Standard - a more precise colour definition

It is evident that a single index is not sufficient to completely characterize the colour rendering of a source.

The TM-30 is the method by which we group together well-known evaluation systems, organized in a systematic way, with the introduction of two other different indexes, the Fidelity Index Rf (which indicates the fidelity of colour rendering) and the Gamut Index Rg (used to evaluate the increase or decrease in saturation), in turn accompanied by a form of graphic representation. Furthermore the method evaluates the illuminant on 99 samples (CES) that reflect the colours of the leaves, flowers, skin tones, paintings, etc. so as to extend our ability to establish its specific rendering.

**UGR**

UGR (Unified Glare Rating) is a unified factor in the international field developed by the CIE (International Commission on Illumination) to evaluate direct discomfort glare due to the use of lighting products. In the European Standard relating to indoor workplaces UNI EN 12464-1, the UGR varies from a minimum value of 10 (no glare) to a maximum value of 30 (considerable glare). The lower the value the lower the glare. The UGR value needs to be calculated because it takes into account the size and characteristics of the environment, the background luminance (ceiling, wall, etc), the luminance of light fixtures and the position of the latter in relation to the observation point.

UGR classification applications

- <13 imperceptible
- 16 perceptible technical drawings
- 19 perceptible reading, writing, schools, offices, working on a pc
- 22 perceptible industry and crafts
- 25 uncomfortable raw industrial jobs
- 28 uncomfortable railway tracks, warehouses
- >28 intolerable

## PHOTOMETRICS KEY

Photometric measurements were taken at the Duralamp Photometric Laboratory. These measurements are performed at a room temperature equal to 25±1 °C as required by UNI EN 13032-1 - Light and lighting - Measurement and presentation of photometric data of lamps and luminaires - Part 1.

The photometric values quoted are dependent on the optical system to which they relate, and from the light source used. In order to improve its production, the Company reserves the right to change these optical systems and consequently relative photometric data without notice.

For ease of use, the photometric curve present within this catalogue is shown and explained below.

On the web site [www.duralamp.it](http://www.duralamp.it) the special section "INFO TECH /Eulumdat" provides all the photometric data in ldt. format that is also given on every product data-sheet.

The photometric curves shown in this catalogue are compiled according to the "C-□" international reference system, where the C0-C180 plane is perpendicular to the fixtures and the C90-C270 plane is parallel to the fixtures, as depicted in the figure. For symmetrical and rotationally symmetric fixtures therefore, a single curve is used.

**POLAR DYAGRAM**

LUMINOUS INTENSITY

PHOTOMETRIC CURVE
